

Restore a grandMA desk using the Autorecovery disk

The aim of this disk is, to make the grandMA bootable after a failed software update. The Autorecovery disk will format the grandMA FLASH drive and installs a minimal VXWorks operating system. You will be able to boot the desk with VXWorks up to a point to enter the Rescue and Cleanup Menu.

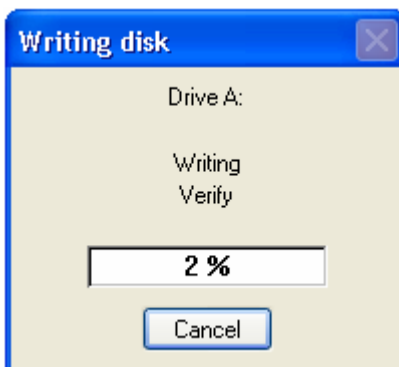

- You need a Microsoft™ Windows® computer with a floppy drive.
- Download the Autorecovery disk from <http://www.grandspares.de>

The file is available either as a .exe or a .zip file
The .zip file contains the .exe file that needs to be extracted.

- Insert an empty floppy disk into your floppy drive
- Execute the .exe file.
- A box appears :

- Press OK. The writing process will be started

The process must finish without any error messages.

- Insert the now bootable floppy disk into your grandMA and switch on the desk.
- The desk now boots with FreeDOS.

Follow the instructions on the screen.
